Respect to claim 16-19, the cited prior arts fail to disclose or suggest the step of treating the well area to increase the surface energy of the well area by at least 10 to 15 dynes/cm² so that said well area is less hydrophobic than a surrounding area of said PTFE sheet in combination with curing the dried slurry to remove organic material and all other limitation in the claims. Respect to claims 20-21, the cited prior arts fail to disclose or suggest an gas diffusion electrode which has been prepared by providing a pre-shrunk microporous PTFE substrate with a confined area that is less hydrophobic than a surrounding area of said substrate in combination with heating the slurry and the PTFE substrate in the confined area to dry the slurry.
